At Sutherland Welles we believe Polymerized Tung Oil is the best choice for an oil based wood finish. Tung Oil will not yellow, darken, mold or mildew like linseed oil. Tung Oil will not crack or peel like polyurethane. Tung Oil surpasses shellac and linseed oil in hardness, durability, and water resistance. Tung Oil is 100% food safe once cured. Tung Oil is easy to apply and repair.

Our Tung Oil Polymerization process improves durability, drying time, luster, and enhances grain and natural color of wood. The Polymerization of our Tung Oil allows us to use minimal quantities of very low toxic chemical driers. We use VOC exempt and low VOC solvents to make our Polymerized Tung Oil Wood finishes environmentally friendly. All of our finishes are food safe after a 30-day cure period.

We use only the highest quality Tung Oil, sourced from sustainable growers in the United States and China. All of our Polymerized Tung Oil finishes contain a minimum of 25% tung oil in their formulations, so the higher the luster, the more tung oil in the formulation.

Polymerized Tung Oil penetrates wood, filling the pores, giving protection from water, insects, mold and mildew. As coats of polymerized tung oil are added the finish continues to penetrate and then build to create a flexible and durable barrier that enhances the grain and natural beauty of wood.

Interior/Original Polymerized Tung Oil

Sutherland Welles Interior/Original Formula Polymerized Tung Oil is a beautiful, durable, and easy to use finish appropriate for a variety of interior finishing projects. The first Polymerized Tung Oil wood finish product that Sutherland Welles formulated, creates the finest hand-rubbed, tung oil finish using the highest quality tung oil, sustainably grown and processed. Our Interior/Original Polymerized Tung Oil will enhance the grain definition of your wood, while maintaining its color. Our Interior/Original line is made with a VOC exempt solvent and is Greenguard Certified for low chemical emissions.

Botanical Polymerized Tung Oil

Sutherland Welles Botanical Polymerized Tung Oil is a petroleum free solvent option for a hand rubbed, tung oil finish. Our Botanical line uses the same polymerization process as all of our Tung Oil finishes, however the solvent used is our proprietary, all botanical, citrus solvent, Di-Citrusol. Our Botanical Products come in low, medium, and high lusters. Millie's All Purpose Penetrating Tung Oil is also part of our Botanical Line and is a classic butcher block finish excellent for cutting boards, bowls and wooden utensils and is food safe. Our Botanical Line is a low VOC finish and is Greenguard Certified for low chemical emissions.

Exterior Polymerized Tung Oil

Sutherland Welles Exterior Polymerized Tung Oil combines our Polymerized Tung Oil with UV guards and fungicides making it a superior exterior clear finish coating for a variety of outdoor applications. Tung oil's elasticity creates a flexible finish that expands and contracts with the environmental changes and harsh seasonal cycles that wood is exposed to.

Wiping Varnish

Sutherland Welles Wiping Varnish is one of our combination tung oil and resin systems, providing extra protection while maintaining a hand-rubbed appearance and feel. The combination of our Polymerized Tung Oil and resin allows for the ease of use of a hand-wiped application. Our Wiping Varnish is made with a VOC exempt solvent, has minimal odor, and a slow evaporation rate allowing for more application open time prior to set up and need to wipe.

Old World Concentrated Stains

Sutherland Welles Old World Concentrated Stains are crafted with a high percentage of aniline dye and Polymerized Tung Oil to provide a range of color saturation and protection. When diluted with our Polymerized Tung Oil Sealer, a full range of color saturations are possible. The colors favor a restoration palette and are for interior use only.

Wood Care Products

Sutherland Welles Wood Care products are formulated with the highest quality ingredients to care for wood and wood finishes. Tung Oil Polish is a finish refresher, Bowl and Board is a food safe rejuvenator for wooden kitchen tools, and our wood cleaner removes dirt and grime before re-finishing or using Tung Oil Polish.

Murdoch's

Sutherland Welles Murdoch's line is an outstanding finish for floors, table tops, countertops, and any project that will be subject to high wear or where the finisher is looking for the beauty and benefits of tung oil with the protection of a resin.

Murdoch's contains our Polymerized Tung Oil and a remarkably durable urethane-alkyd resin with minimal yellowing or ambering tendencies and an amazing clarity that's more like Tung Oil than urethanes.

Murdoch's does not have the "plastic" appearance of many polyurethanes. Applied properly, Murdoch's will not crack or peel and is easy to repair and re-coat. Spot repairing requires scuffing and recoating sections, so when the finish wears over time, you do not need to sand your projects down to bare wood as you would with polyurethane, just scuff and re-coat.
